## Developmental Milestones: Your Infant at 9 Months

### What are developmental milestones?

Developmental milestones are skills most children achieve by a certain age. Developmental milestones include physical, social, emotional, cognitive, and communication skills that are appropriate for the child's age. Milestones give important clues about a child's health and well-being. Any child whose milestones are delayed should be evaluated by a health or developmental professional.

- Social and emotional milestones include how children learn about their own emotions and
  the emotions of others. These milestones also involve learning how to interact and play with
  other people.
- Language and communication milestones involve language, speech, and nonverbal communication (for example, hand gestures or facial expressions). These milestones include a baby's babbling, their first words, and their ability to listen to others and hold a conversation.
- Cognitive (learning, thinking, problem-solving) milestones are centered on a child's ability
  to think, learn, and solve problems. Cognitive milestones include an infant learning how to
  react to different facial expressions and a preschooler learning to say the alphabet.
- Movement/physical development involves both gross motor skills and fine motor skills. Gross
  motor skills are typically the first to develop. They include your child's ability to support their
  head, sit up, stand, crawl, and walk. Fine motor skills involve precise movements such as
  grasping a spoon, picking up small objects, and drawing.

As a parent or caregiver, you spend the most time with your child and know them the best. If your child is not meeting these age-related milestones, or if you think there could be a problem with the way your child plays, learns, speaks, or acts, it is important to tell your child's primary care provider so they can assess your child's development. Discuss any concerns with them at your child's 9-month well-child exam.

Here are the milestones to expect from your child based on what most babies do at this age:

#### Social and emotional

- May be afraid of strangers
- May be clingy with familiar adults
- Has favorite toys

### Language/communication

- Understands "no"
- Makes a lot of different sounds like "mamamama" and "bababababa"
- Copies sounds and gestures of others
- Uses fingers to point at things

### Cognitive (learning, thinking, problem-solving)

- Watches the path of something as it falls
- Looks for things they see you hide
- Plays peek-a-boo

UT Health Austin Pediatric Neurosciences at Dell Children's Austin, TX 78723

## Developmental Milestones: Your Infant at 9 Months

- Puts things in their mouth
- Moves things smoothly from one hand to the other
- Picks up things like cereal "O's" between thumb and index finger

### Movement/physical development

- Stands, holding on
- Can get into sitting position
- Sits without support
- Pulls to stand
- Crawls

Tell your child's doctor if you notice any signs of developmental delay for this age. Most communities also have early childhood intervention programs that can help assess your child.
